These mains sockets will be powered by an inverter, which converts 12V DC electricity from your leisure batteries to 120V/240V AC mains electricity. ... With alternating current, the electrical force vibrates back and forth rather than flowing continuously. This is known as oscillation. In an AC system, there are no positive or negative poles. ...

When the F3800 is stand-alone and you do AC charging, it basically takes over 1 of the 2 DC to AC inverters that give you the 2 120V legs and reverts it and use it as an AC to DC inverter for charging. So that's why 240V output is no longer possible, because now only 1 DC to AC inverter is available, and 2 must be available to provide 240V.

However, if the inverter is putting out 2000 W, the input current will probably be over 200 A at 12V. I would like to read the inverter installation instructions, but probably you need to ground the battery to chassis near the ...
