@ValkyrieVanLife where did you see that reference to the inverter not working with LFP? I didn't see it on the site or in the manual. To me there's nothing fundamentally different about it than other comparable inverters like the GoWise and Giandels that Will recommends. Looking at various manuals, this Wagan low voltage alarm is 10.5V, GoWise is 10.6V, and ...

As soon as I fill the batteries, the inverter doesn't work until it drops below the threshold. The question is what is the best thing to use to drop the battery output voltage on the inverter supply circuit to the needed 15v from 16.8v? I would think a resistor would work, but it seems to heat up, and of course the voltage change is dependent ...

When the 12/16v battery gets low, the Tesla switches on the 400v main battery to top off the smaller one. Obviously, the current Tesla models were not designed for continuous aux power draw. The Cybertruck should have a built in inverter connected to the main battery for those purposes similar to the F150 and ioniq5.
