What is a container energy storage system?

A Container Energy Storage System (ESS) is a modular,scalable solution for storing electrical energy. It typically consists of batteries housed in a shipping container,which makes it easy to transport and deploy. These systems can be used for various applications such as grid support,renewable energy integration,and backup power.

What is an ESS container used for?

It typically consists of batteries housed in a shipping container,which makes it easy to transport and deploy. These systems can be used for various applications such as grid support,renewable energy integration,and backup power. How do I determine the appropriate size and capacity of the ESS container for my application?

Do ESS containers come with air-cooling and liquid- cooling?

Our ESS containers come with both air-cooling and liquid-cooling options. Air-cooling systems are typically used for smaller capacities,while liquid-cooling systems are suitable for higher capacities due to their superior thermal management. Effective cooling is crucial for maintaining optimal battery performance and longevity.
