The difference between frequency converter and inverter. 1. An inverter is a component used to convert direct current into alternating current. An inverter is a component used to change the frequency of alternating current. 2. The inverter converts DC power into AC power (usually 220V, 50Hz sine wave), and the frequency can also be adjusted;

These frequency inverters can generate an AC voltage that is variable in amplitude (the output voltage level) and frequency from a constant AC voltage. How does a frequency inverter work? A frequency inverter is therefore connected upstream of a motor to generate an AC voltage that can be adjusted to meet customer requirements.
