

Household solar light sensor

How does a solar motion sensor work?

To increase security in any house or building, the product includes an outdoor motion sensor that is activated only when movement is detected and that automatically turns the solar motion lights off after movement stops. Regarding the sensor range, it is estimated to cover up to 10 feet with a sensing angle of 120°.

Why should you install a solar motion sensor?

Solar lights are cost-effective, durable, and independent from any connection to the grid. In the event of a blackout, your house could be at greater risk since thieves take advantage of these situations. By installing a solar-powered motion sensor, you can ensure that no person will be sneaking around your house unnoticed.

What are the brightest solar security lights?

Aoote also offers these motion sensor lamps that can be considered one of the brightest solar security lights. Your house or business can now be protected by installing the Aoote motion security lights that detect motion at 26 feet of distance with a sensor angle of 120°. This product also provides one of the brightest LED lights.

Do solar motion security lights deter criminals?

By installing the brightest solar motion security lights, any attempt approaching your business or home will deter the criminals since the motion sensor will detect someone close and will activate the security lights. It is always a good idea to have some sort of light active outside your property as it may make criminals think twice.

Are solar motion security lights safe?

Absolutely! Nothing scares more a criminal than an unexpected super bright light in the middle of the dark. By installing the brightest solar motion security lights, any attempt approaching your business or home will deter the criminal since the motion sensor will detect someone close and will activate the security lights.

How long do solar motion sensor lights last?

The battery capacity determines the amount of energy that can be stored and therefore determines the amount of time that the solar motion sensor lights can last. On average, this is typically between 8 -12 hours, which is enough to light up the night. The available modes of operation determine how constantly the LEDs are used.

In general, solar light sensors will detect artificial light and can even charge the light's battery. However, since the lumens provided by artificial light are much lower than what is provided by natural sunlight your solar lights will charge much more ...
