Is the outdoor power supply really that good

Difference Between Outdoor and Indoor Power Strips. To be honest, there isn't really any outdoor power strip that is completely suitable for the outdoors. Yes, some companies will create power strips and label them as sufficient for outdoor use, but none of them are particularly designed to withstand the elements for extended periods of time.

This type of "Electronic-Transformer" is designed to be just good enough to provide power to a Resistive - Incandescent-Load, which doesn't care about anything except "Average-Power". ALL OTHER BETS ARE OFF. It may be better to use 3 separate Lighting Circuits. Be careful, those "Transformers" may not be "Isolated" from the Mains Power....

An external power supply will help take that stress off of your main power supply and instead spread out amongst the two, which can cause the heat buildup to lessen considerably. When this happens, you cool off your system overall and, considering heat is one of your PC's biggest detriments, that is a great benefit to have.

As an outdoor socket will need to be supplied by a 30mA RCD protected circuit, you will need to run your supply cable from the supply (normally the consumer unit) to the install location. If your consumer unit is quite far inside your home then you may need to start drilling holes through walls or running cables up through floors, which can get ...
