Can a large-scale photovoltaic system increase energy capacity in Kosovo?

This is the first large-scale photovoltaic system in Kosovo that can increase the installed capacity of photovoltaic energy from the current 10.1 MW (2022) to up to 110.1 MW. The project contributes to the achievement of these following United Nations Sustainable Development Goals:

How will a solar power plant benefit Kosovo?

The solar power plant will help save more than 130,000 tonnes of carbon dioxide emissions annually. In total, 152 GWh of green electricity will be produced annually, benefiting Kosovo households, public institutions and companies. Power outages are expected to be less frequent in the future.

Does Kosovo have a green energy system?

Kosovo still generates electricity primarily from coal-fired power plants, but a rapid expansion of green energy is aiming to change this. A photovoltaic system is being built on the areas where ash from the two coal-fired power plants at Kosovo A was previously deposited.

Where is a photovoltaic system being built?

A photovoltaic system is being built on the areas where ash from the two coal-fired power plants at Kosovo A was previously deposited. It will have an installed capacity of up to 100 MW and produce 152 GWh of electricity annually. The plant will be erected on the partly rehabilitated ash heaps that are no longer in use.

How much energy will Kosovo generate by 2031?

To fulfil the National Strategy, it is envisaged that at least 1,400 MW of energy will be generated from wind and solar power by 2031. Kosovo still generates electricity primarily from coal-fired power plants, but a rapid expansion of green energy is aiming to change this.
