The place where adding supercapacitors to a battery would help the most (IMHO) is a DD hubmotor ebike on fairly flat land. On a long downhill, the SC's would be "filled" in a short amount of time, and then the rest of the downhill, any further regen harvesting would be limited by the batteries ability to absorb it, which is the original bottle-neck in the first place.

Single-cell large-capacitance supercapacitors mainly refers to products with a rated voltage of 2.7V in a single cell, and with a capacitance range of 650F-10000F. JEC supercapacitors have low internal resistance and long service life, enabling fast charge and discharge. Because the power density of large-capacitance supercapacitor energy storage
