It is also essential to note that off-grid solar plays a critical role in Myanmar's power supply strategy. Several roof-top solar projects are currently underway in the country's marginalized rural areas. Essentially, there are vast opportunities for solar installers and professionals on the utility-scale and off-grid solar segments.

An on-grid inverter's main job is to convert DC power generated from the PV array into usable AC power. Hybrid inverters go a step further and work with batteries to store excess power as well. In the developing world, hybrid inverters are more of a necessity to compensate for weak or intermittent grids or a lack of grid electricity all together.
