What does an inverter do in an off-grid power system?

In an off-grid power system, the inverter plays a crucial role in converting the DC (Direct Current) power stored in batteries or generated by renewable energy sources into usable AC (Alternating Current) power for running electrical devices and appliances.

On-Grid Inverters (Single Phase Inverter 1kW / 2kW) Our on-grid inverters are usually connected to a utility grid and function by matching their frequency with the utility grid sine wave. They are designed to spontaneously shut down in the event of a power cut for safety reasons. Hence, they stop supplying power during an outage.
