photovoltaic (PV) panels into alternating current (AC) electricity in order to supply power to a home, industrial equipment, or the electrical grid. The electricity generated by solar solar module is DC, but most power-consuming equipment and grids use AC.

It can be observed that solar-PV systems improve the voltage stability by enabling more reactive power reserve (  $Q_s - Q_L = 615 \text{ MVar}$  ) which improves the stability margin (  $(V_o - V_{cr}) / V_o = 39\%$  ) of the system in comparison to SGs. Fig. 25 illustrates the reactive power output at the PCC and the terminal voltage of solar-PV systems and SGs.
