

Place outdoor cylindrical solar lights

Where should solar lights be placed?

Placement also depends on the type of solar lights you choose. If your solar lights were bought with practicality in mind, such as lighting a pathway or shining a spotlight on the patio, you know the result you want to achieve and this can give you a rough indication of where to place them.

Do solar lights work in shade?

Ideally, the more sunlight the solar panels will receive, the better, but that's not to say solar lights won't work in partially shaded areas. Consider where sunlight is best in your garden and try charging up the panels there before permanently placing them.

How do I choose the best solar lights?

Choosing the best solar lights is one thing, but finding the best place for them in your backyard is a whole other task. This requires a combination of taste and practicality -- you want the lights to look good, but they need to work as well. Your options can be restricted by several factors including function, aesthetics and the environment.

How do I protect my solar panels?

It's also good to check that any leaves or vegetation won't block the solar panels too. The lights won't be as bright if they can't effectively charge. Keep the panels away from any other light sources, such as windows, so they won't mistake the light for daylight and switch off at night.

How do you install a solar cell in a pergola?

While there are a variety of shapes available, string lights with Edison bulbs add a vintage look. String them through a pergola's rafters or from tree to tree, then position the solar cell in a place that receives at least 6 hours of direct sunlight.

How do solar lights work on a deck?

The light shining downward will add subtle mood lighting to an evening soiree on the deck. To ensure that a party can last long into the evening, the solar cell powering the lights needs to be positioned so it receives at least 6 hours of direct sunlight during the daytime.

Not suitable for all solar lights: These stakes are only suitable for use with solar patio light poles with an inside diameter of 0.83-0.84 inches, which may not fit all types of solar lights. Might require additional adjustments: Some users have reported that they had to wrap the connecting end in duct tape or cut a section away to make them ...
