The unit of capacitance is Farad (F) which is named after M. Faraday. Farad is the capacitance unit in respect of coulomb/volt. If we say a capacitor with 1 Farad, then it will create a 1-volt potential difference between its plates depending on the 1-coulomb charge. 1 Farad is a very large value capacitor to use as a general electronic component.

Riyadh Super Farad Capacitor

Farad explains that "Super capacitors combine a very high capacitance with high pulse power capability and low ESR values. In short they act like batteries without their disadvantages". Which is quite a claim given that batteries are on paper at least close to the ultimate power supply, but they have their practical limitations unless you ...
