

Solar panel replacement system

Should you upgrade or replace your solar panels?

Old solar panels, while still functional, might not be harnessing solar energy as effectively as the newer models. Replacing or upgrading to a more advanced model can thus translate to more electricity generation from the same square footage. Economic logic often drives homeowners and businesses to consider upgrades.

How often do solar panels need to be replaced?

How often do solar panels need replacing? Solar panels are typically replaced when they become damaged or stop working effectively. Generally, this can be rounded up to every 25 years or so. However, the replacement window may be minimised if there are major defects or damage.

Should I remove solar panels to replace roof sections?

If you need to remove solar panels to replace roof sections, having a solar expert do the work can make the project go smoother. Additionally, roofers are rarely trained to install home solar panels and maintain solar power systems.

Should I replace my old solar panels?

It is common knowledge that solar panels reduce their efficiency as they age, and older panels won't be as efficient as brand new ones, but this doesn't necessarily mean that they won't work. For the most part, if there isn't significant damage, then replacing solar panels will come down to a matter of personal preference.

Do I need to remove and reinstall solar panels?

There are two primary reasons why you might need to remove and reinstall solar panels: fixing your roof and fixing your solar power system. Even minor roof repairs can necessitate having some or all of your solar panels removed and reinstalled.
