

What is an uninterruptible power supply (UPS) system?

An Uninterruptible Power Supply (UPS) system protects electronics and other vital equipment, infrastructure and machinery from unexpected power issues as well as provides short-term emergency backup power during disruptions to the mains electricity supply. HOW DOES A UPS WORK?

Who is ups & emergency power backup company?

We are a specialist Uninterruptible Power Supply (UPS) and emergency power backup Company, with over 250 years of combined UPS and battery backup experience.

What is a ups & how does it work?

What is a UPS? UPS stands for uninterruptible power supply, it's a device that acts as a battery backup in case of an electrical power failure. Small UPS machines for homes and offices supply enough power for a few minutes, so there's time to turn off devices properly without losing any work.

Do smart devices need an uninterruptible power supply (UPS)?

Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in.

What happens if a ups fails?

A UPS can supply power in the event of a complete power failure or supply protection in the event of a power surge or dip. When there is a power failure, the UPS will automatically take over and keep the equipment functioning thus preventing hardware damage, software corruption and down time.

What does a UPS protect against?

An uninterruptible power supply (UPS) is an electrical device that protects your equipment from spikes, dips, surges, high/low voltages and blackouts. PSS Distributors serve every day businesses in every industry, providing various backup options with different periods of backup time depending on the client.
