How long does a supercapacitor last?

A supercapacitor's lifetime spans 10 to 20 years,and the capacity might reduce from 100% to 80% after 10 or so years. Thanks to their low equivalent series resistance (ESR),supercapacitors provide high power density and high load currents to achieve almost instant charge in seconds.

How do supercapacitors store electrical energy?

Supercapacitors store electrical energy at an electrode-electrolyte interface. They consist of two metal plates,which only are coated with a porous material known as activated carbon. As a result,they have a bigger area for storing much more charge.
