What Is an Uninterruptible Power Supply (UPS) An UPS is a device that supplies power to connected devices for a certain period of time in the event of a power failure due to a power failure.. It has a built-in battery and supplies power to servers, PC electronic equipment, network equipment, etc. in the event of power failure or power supply trouble, for example.

Include all of the devices the UPS will need to support. If a piece of equipment has a redundant power supply, only count the wattage of ONE power supply. If you are unsure how many watts your equipment requires, consult the manufacturer or power supply specifications in the user manual. Here is an example of an equipment list to verify the load:

3000VA / 2100W Power Capacity: Protects critical equipment during outages. Pure Sine Wave Output: Delivers clean power for sensitive electronics. Automatic Voltage Regulation (AVR): Maintains consistent voltage levels. LCD Status Display: Provides real-time UPS information. Network Management Ready: Enables remote monitoring (card sold separately).

Uganda Large Uninterruptible Power Supply Equipment

We provide quality UPS System Rental equipment ranging from 15kVA to 1,000kVA in either a trailer mounted or standalone form factors. ...
